Introduction to Applied Econometrics
Chapter 1  The Nature of Econometrics

1.1 What Is Applied Econometrics?
1.2 Course of Action – Development of Formal Quantitative Models
1.3 The Nature of Econometrics
1.4 Components of Applied Econometrics
1.5 Products of Applied Econometrics
1.6 Data and Disciplines in Applied Econometrics
Chapter 2   Getting Started

2.1   The Model Specification Phase
2.2   Generic Multiple Regression Model
2.3   Software Considerations
2.4   Importance of Communication and Aims for the Analyst
2.5   Data
Chapter 3  Mathematical and Statistical Considerations of Applied Econometrics

3.1 Mathematical Considerations

3.2 Statistical Considerations

3.3 The Simple Linear Regression Model

3.4 Example: SAS Output of the Simple Linear Regression of Total Personal Bankruptcies (TPB) on Real Gross Domestic Product (RGDP)

3.5 The Multiple Regression Model – The Generic Single Equation Econometric Model

3.6 Example: SAS Output of the Demand Function for Shrimp

3.7 Multiple Regression Model: Another Illustration

3.8 Goodness-of-Fit Statistics and Model Selection
Chapter 4  Common Tests of Hypotheses in Applied Econometrics

4.1 Introduction: Preliminary Statistical Elements
4.2 Basics of Hypothesis Testing
4.3 Tests of Normality of Residuals
4.4 Tests of Hypotheses Regarding Structural Parameters of Econometric Models
4.5 Nonlinear Combinations of Coefficients (χ²-tests)
Chapter 5  Use of Indicator or Dummy Variables in Applied Econometrics

5.1  Introduction
5.2  Intercept Shifters
5.3  Slope Shifters
5.4  Intercept Shifters and Slope Shifters
5.5  Final Thoughts about the Use of Indicator or Dummy Variables
Chapter 6  Diagnostics Checks – Autocorrelation or Serial Correlation

6.1 Introduction
6.2 Autocorrelation or Serial Correlation
6.3 Tests for Serial Correlation
6.4 Sample Problem: The Demand for Shrimp
6.5 Sample Problem: The Demand for Gasoline (Greene)
6.6 A Test for Serial Correlation in the Presence of a Lagged Dependent Variable
6.7 Summary Remarks about the Issue of Serial Correlation
Chapter 7  Diagnostic Checks – Heteroscedasticity

7.1 Introduction
7.2 Weighted Least Squares (WLS)
7.3 Example of Econometric Analysis with Heteroscedasticity
7.4 Multiplicative and Additive Heteroscedasticity
7.5 Common Tests of Heteroscedasticity
7.6 Maximum Likelihood (ML) as Opposed to Weighted Least Squares (WLS)
7.7 Recommended Procedures to Combat Heteroscedasticity
Chapter 8  Diagnostic Checks-Multicollinearity, Collinearity, and Ill-Conditioning

8.1 Introduction
8.2 Collinearity Diagnostics
8.3 Solutions to the Collinearity Problem
8.4 Examples
8.5 Commentary
Chapter 9  Diagnostic Checks-The Detection and Assessment of Data Outliers

9.1  Background
9.2  Influence Diagnostics
9.3  Solutions to the Problem of Influential Observations
9.4  Robust Regression Techniques
9.5  Examples
9.6  Commentary
Chapter 10  Structural Change and Stability of Structural Coefficients

10.1 Introduction
10.2 Diagnostic Tests for Structural Change
10.3 Example: U.S. Gasoline Consumption 1960-1995
10.4 Illustration of Sequential Chow Tests
10.5 Illustration of the Farley, Hinrich, and McGuire Test
10.6 Illustration of Recursive Coefficients
10.7 Illustration of Recursive Residuals, CUSUM, and CUSUMSQ Tests
10.8 Commentary
Appendix A  References
